

An Academia-Industry Networking Event

Concordia University
Wednesday
May 17th, 2017

Hosted by

and the

Software Engineering Research Center 

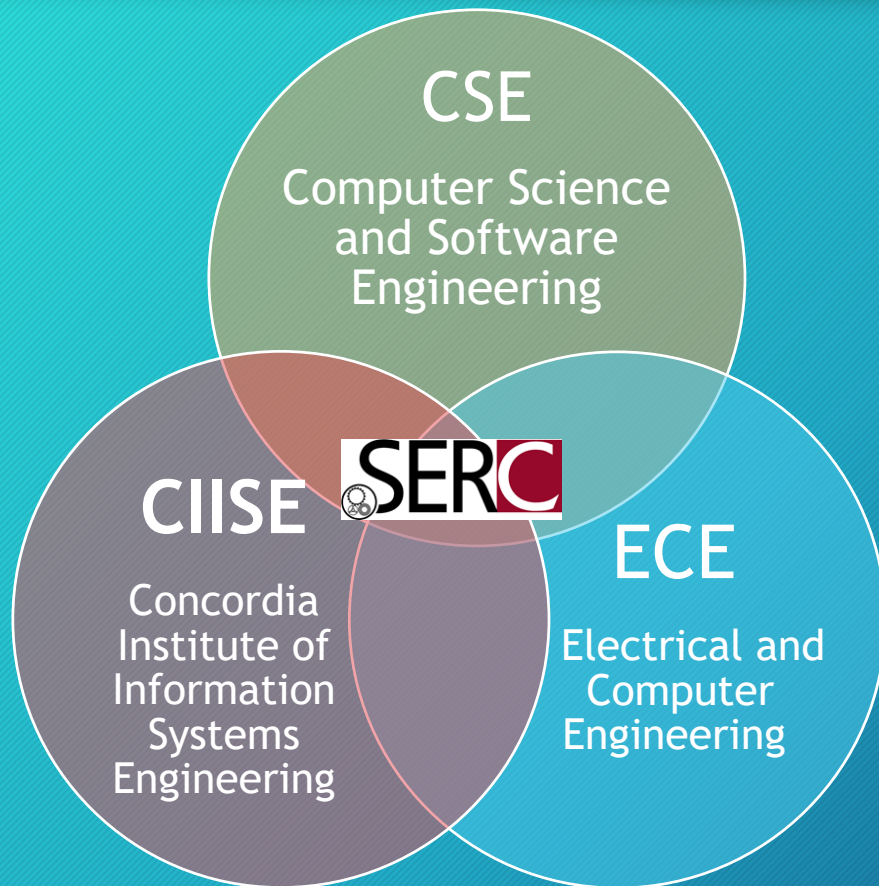

Faculty of Engineering & Computer Science

“Software publishing in Québec generates annual revenues of over \$1.7- billion. Québec's software-publishing industry is dominated by cutting-edge Québec-based SMEs targeting often specific niches. “

IQ investissement Quebec www.investquebec.com/

Center Overview

facts:

Founded in 2015

Currently 3 departments involved

13+ members

Approx. 100 research students

Expertise in core SE areas

Overview

Core Areas of Expertise

Empirical Software Engineering

- Mining software repositories
- Software analytics and big data
- Collaborative aspects of software development

Modeling, IoT and Cloud Computing

- Formal methods and model-driven SE
- Wireless communication and networks
- IoT, Services, and cloud computing

- Innovation and Best Practices -

SE Quality and Best Practices

- Life cycle support
- Process and project support
- Software quality and best practices

System Engineering and Evolution

- Software analytics, testing and evolution
- Software development
- Tool and technologies

Expertise Empirical Software Engineering

Applied software engineering research

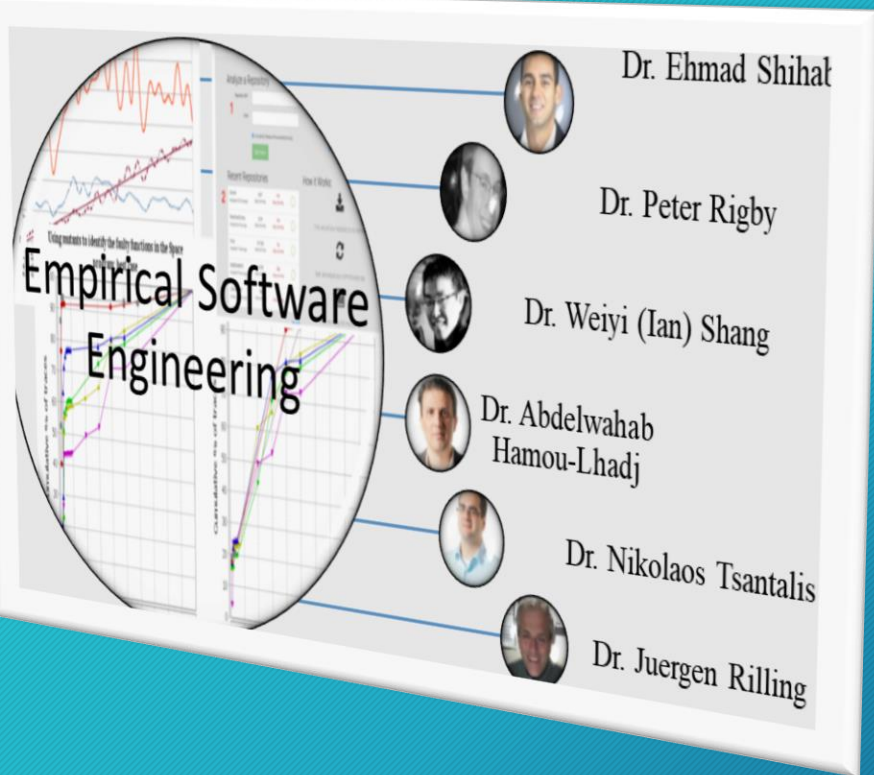

- Studies involving collection of data and experience.

Empirical results

- Create a body knowledge.
- Leading to new accepted, well formed theories.

Mining Software Repositories

- Make historical data actionable through data analytics.
- Validate novel ideas and techniques.

Expertise Modeling, IoT and Cloud Computing

Model Driven Development

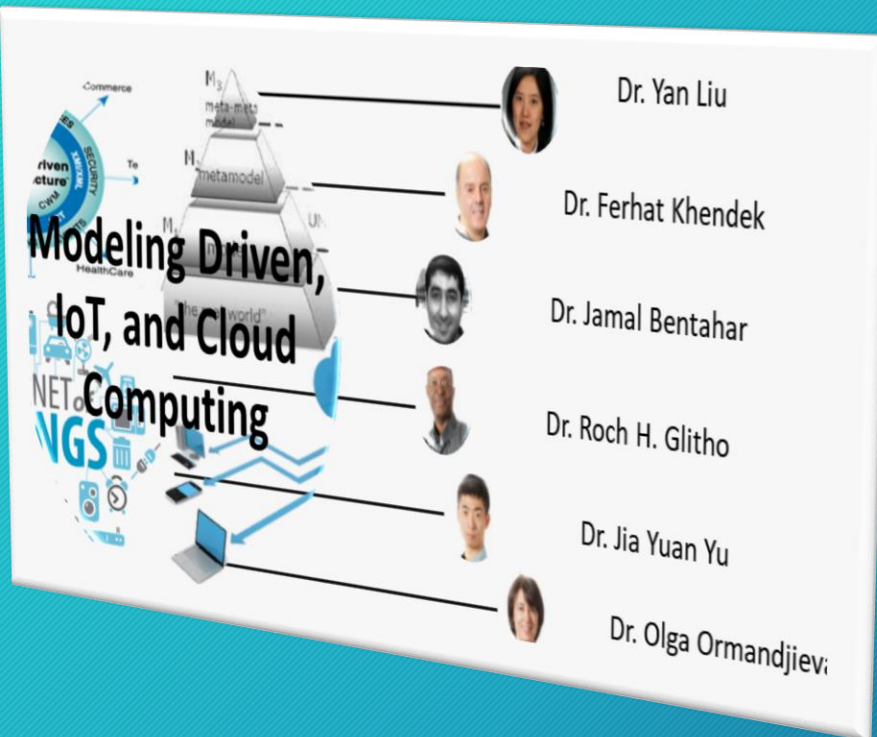

- Compatibility between systems via standardized models.
- Integrated part of cyber-physical and other emerging systems.

IoT and Cloud Computing

- Big data and automation of processes.
- Resource distribution and improved ubiquitous computing environments.

Wireless communication

- Enhancing and developing new wireless infrastructure technologies.

Expertise SE Quality and Best Practices

Software Quality and Measures

- Quality frameworks and assessment
- System compliance to functional and non-functional requirements.

Software Processes

- Assessment and understanding of development processes and their optimization.

Collaborative Software Engineering

- Shared understanding of software artifacts within larger development processes.
- Artifact-neutral coordination technologies and toolkits.

Expertise System Engineering and Evolution

System Engineering

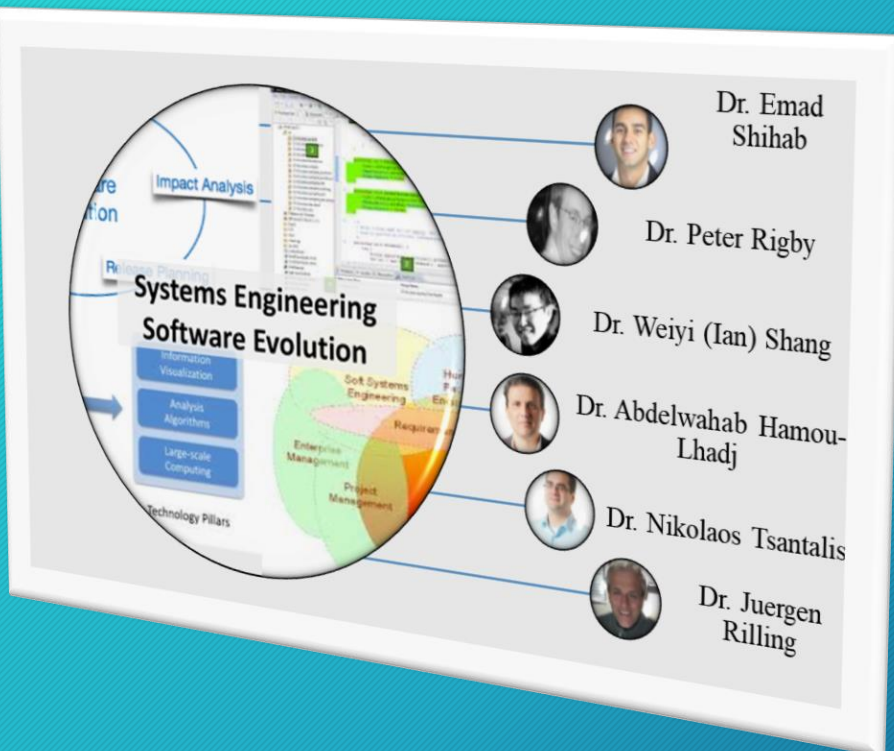

- Understanding of stakeholder needs.
- Software Lifecycle support.
- Tool development and analysis of software artifacts.

Software Evolution

- Software traceability.
- System comprehension.
- Recovery and reverse engineering of information.

Tool development and best practices

- Tool support for software analytics.
- Capturing and modeling of best practices.

Why - Our Value proposition

Expertise

- Access to experts in various areas of software engineering research.

Highly Qualified Personnel

- Access to highly trained and motivated students.
- Opportunity to take advantage of co-op initiatives.

Technology and Knowledge Transfer

- Access to state-the-art of technologies.
- Win-win situation for both industry and academia by working on real world problems.
- Cost sharing between industry and government agencies.

	Jamal Bentahar: Intelligent agents and multi-agent systems, formal methods Web: http://users.encs.concordia.ca/~bentahar/ E-mail: bentahar@ciise.concordia.ca
	Rachida Dssouli: Communication software engineering, QA, conformance testing Web: http://users.encs.concordia.ca/~dssouli/ E-mail: rachida.dssouli@concordia.ca
	Roch H. Glitho: Architectures for end-user services, Virtualization and cloud computing, IoT Web: http://users.encs.concordia.ca/~glitho/ E-mail: Glitho@ciise.concordia.ca
	Abdelwahab Hamou-Lhadj: Software tracing, trace-based anomaly detection systems (cybersecurity) Web: http://users.encs.concordia.ca/~abdelw/ E-mail: wahab.hamou-lhadj@concordia.ca
	Ferhat Khendek: Modeling, Design and Validation, Service High Availability, Next Generation Networks Web: http://users.encs.concordia.ca/~khendek/ E-mail: ferhat.khendek@concordia.ca
	Yan Liu: Software architecture, model driven development, embedded and cyber-physical systems Web: http://users.encs.concordia.ca/~liu/ E-mail: yan.liu@concordia.ca
	Olga Ormandjieva: Formal methods, autonomic and reactive systems, software measures Web: http://users.encs.concordia.ca/~ormandj/ E-mail: ormandj@cse.concordia.ca
	Peter Rigby: Software analytics, empirical software engineering, release engineering, collaborative Web: http://users.encs.concordia.ca/~pcr/ E-mail: peter.rigby@concordia.ca
	Juergen Rilling: Global software analytics, software traceability, software evolution, knowledge management Web: http://users.encs.concordia.ca/~rilling/ E-mail: Juergen.rilling@concordia.ca
	Weiyl (Ian) Shang: SE for ultra-large-scale systems, performance engineering, empirical SE Web: http://users.encs.concordia.ca/~shang/ E-mail: shang@encs.concordia.ca
	Emad Shihab: Software Quality Assurance, Software Maintenance, Empirical SE, Mobile Applications Web: http://das.encs.concordia.ca/members/emad-shihab/ E-mail: eshihab@cse.concordia.ca
	Nikolaos Tsantalis: Empirical software engineering, refactoring recommendation systems Web: http://users.encs.concordia.ca/~nikolaos/ E-mail: nikolaos.tsantalis@concordia.ca
	Jia Yuan Yu: Data science, decision theory (machine learning, statistics, game theory, operations research) Web: http://users.encs.concordia.ca/~jiayuan/ E-mail: jiayuan.yu@concordia.ca

Thank you !
